I. Algoritmo

Introdução a algoritmos 1 (conceito e história)

Guilherme Ferreira Silveira

2 de abril de 2026

gfsilveira@gmail.com

Algoritmo

Algoritmos são conjuntos de passos finitos e organizados que, quando executados, resolvem um determinado problema.

Algoritmo

Algoritmos são conjuntos de **passos finitos** e **organizados** que, quando executados, **resolvem** um determinado **problema**.

Algoritmo

Algoritmos são conjuntos de **passos finitos** e **organizados** que, quando executados, **resolvem** um determinado **problema**.

Maior Divisor Comum

Euclides de Alexandria – 400 a.E.C.

$$\text{MDC}(a,b) = \text{MDC}(b,r)$$

Onde:

a = número maior

b = número menor

r = resto de a/b

Como Funciona (Passo a Passo):

- 1.Divisão Inicial:** Divida o maior número pelo menor número.
- 2.Repetição:** Troque o dividendo pelo divisor anterior, e o divisor pelo resto (R). Continue dividindo..
- 3.Finalização:** Repita o processo até que o resto seja 0..
- 4.Resultado:** O MDC é o último resto diferente de zero obtido..

Algoritmos são conjuntos de **passos finitos** e **organizados** que, quando executados, **resolvem** um determinado **problema**.

Sistema numérico hindu-árabe

Motor Analítico

Charles Babbage

“O pai do computador”

1833 – 1910

Primeiro Algoritmo Publicado

Ada L. Lovelace

1840, Babbage, Universidade de Turin -> Luigi Menabrea, Frances

1842, Charles Wheatstone contrata Ada L. Lovelace, Inglês.

1843, publicação.

Primeiro Algoritmo Publicado

Ada L. Lovelace

Ada L. Lovelace

An oval-framed portrait of a woman, likely a historical figure, dressed in 18th-century fashion. She wears a dark, lace-trimmed veil or shawl over a purple and white gown. Her hair is styled in an elaborate updo with a yellow flower. She holds a quill pen in her right hand. The background is a soft, mottled brown.

Máquina de Turing

Figure 3 (middle). Interpretation of multiplication

It is evident that with the above definitions the following postulates will hold:

Postulates

1. *a.* $0 \cdot 0 = 0$
b. $1 + 1 = 1$

An open circuit in parallel with a closed circuit is a closed circuit.
An open circuit in series with an open circuit is an open circuit.
2. *a.* $1 + 0 = 0 + 1 = 1$
b. $0 \cdot 1 = 1 \cdot 0 = 0$

An open circuit in series with a closed circuit in either order (i.e., whether the open circuit is to the right or left of the closed circuit) is an open circuit.
A closed circuit in parallel with an open circuit in either order is a closed circuit.
3. *a.* $0 + 0 = 0$
b. $1 \cdot 1 = 1$

A closed circuit in series with a closed circuit is a closed circuit.
An open circuit in parallel with an open circuit is an open circuit.
4. At any given time either $X = 0$ or $X = 1$.
